

H.I. Fraser - O'Connor

SIZE	PANEL	INVERTERS	ESTIMATED OUTPUT	CARBON OFFSET	YEAR 1 SAVINGS
33 kW	119 x 280 watts	1 x STP25000 SMA	Up to 53,500 kWh/year	50,000 kg/year	Over \$20,000

Based in Australia, H.I. Fraser was founded on a fundamental passion for fixing both complex and simple oil and gas problems. It is this passion that has seen them operate for over 60 years, with the current ownership beginning in 1989.

HI Fraser, are a engineering company located in Perth, Western Australia. They specialise in the oil and gas industry.

Australis Solar in partnership with HI fraser provided their warehouse with a customised 33kW solar photovoltaic system, which includes high quality German components and monitoring equipment.

The solar energy produced will offset over 1,000 tonnes of CO₂ over the life of the system. In

addition to the carbon footprint reduction the company also benefits from substantial electricity cost savings for the 25 year life of the system.

Solar Energy has become the natural choice for many commercial and residential properties in Australia. It offers attractive returns on investment and makes consumers more independent from future power price hikes. And more importantly, it is the right move towards a sustainable and clean energy future.

HI Fraser has demonstrated future-oriented thinking by switching to solar. If you would like your home or business to benefit from solar energy, contact us today for a free consultation.
